Full Stack Software Developer

Professional Summary

Full Stack Software Developer with 5 years designing and operating high-throughput, fault-tolerant backend and frontend applications using Java, Spring Boot, Python, Node.JS, and AngularJS. Experienced supporting systems used by thousands of users and processing millions of events daily. Focused in implementing tools and building reliable platforms that support high-volume, customer-critical workflows at scale.

Professional Experience

Full Stack Developer | Whitesky Communications, Inc. | October 2021 – Present

Java • JavaScript • TypeScript • MongoDB • AngularJS • Linux (WSL/Bash), Azure DevOps

- Implemented Test-Driven Development (TDD) to maintain 90%+ test coverage and improve code quality.
- Built and optimized Java-based REST APIs supporting operations across 500+ locations, improving performance through query optimization and caching.
- Authored technical documentation for API contracts, system architecture, and onboarding guides.
- Developed backend microservices within a Linux-based development environment using Bash, SSH, and WSL.
- Maintained Node.js services and utilities to support API integrations and streamline backend workflows.
- Diagnosed and resolved 100+ production incidents, performing root-cause analysis, and implementing long-term fixes.
- Managed deployments for 90%+ Java services, strengthening application resilience, and environment consistency.
- Implemented Redis caching and async messaging (ActiveMQ) to reduce downstream load and support scalable, event-driven processing by 15%.
- Collaborated with product managers, QA, and platform teams to align technical solutions with business needs.
- Utilized Graylog dashboards to monitor microservice health, visualize latency trends, and identify performance regressions across distributed systems.
- Applied generative AI tools (Claude, Copilot) to accelerate codebase refactoring, architectural prototyping, and structural data boundary debugging.

Software Engineer II | J.B. Hunt Transportation, Inc. | Part-Time | August 2022 – October 2025

Java • Spring Boot • Kubernetes • Redis • ActiveMQ • Azure DevOps

- Designed and operated fault-tolerant, low-latency Java microservices supporting real-time workflows used by thousands of drivers daily.
 - Improved engineering velocity by enhancing CI/CD pipelines in Azure DevOps, reducing deployment times, and increasing reliability across core logistics microservices.
 - Analyzed millions of event records in Google BigQuery to monitor system behavior and detect anomalies.
 - Built event-driven integrations using ActiveMQ, enabling scalable asynchronous workflows.
 - Built automated integration, contract, and load tests, maintaining 95%+ test coverage across multiple services.
 - Executed performance and load-testing using JMeter style techniques to benchmark API throughput and latency.
 - Utilized Grafana dashboards to monitor microservice health, visualize latency trends, and identify performance regressions across distributed systems.
-

Technical Skills

Languages: Java, Python, JavaScript / TypeScript, Angular, React

Backend & APIs: Spring Boot, REST APIs, Microservices, Event-Driven Systems

Cloud & Infrastructure: Kubernetes (AKS), Docker, CI/CD (Azure DevOps)

Data & Messaging: PostgreSQL, MongoDB, Redis, ActiveMQ

Data & AI/ML Engineering: Random Forest Regression, Scikit-Learn, NumPy, Pandas, ETL Pipelines

Education

California State Polytechnic University, Pomona | Bachelor of Computer Information Systems | December 2021
